Claims 1-42 (canceled)

Claim 43:

storing, by a server, one or more values of historical data wherein the historical data comprises at least one measurement of an investment;

receiving, by the server, via a computer network, financial input data for the investment from one or more data processing systems;

determining, by the server, a measurement for the investment based on the financial input data;

calculating, by the server, information content of the financial input data using continuous, discrete and a combination of continuous and discrete modes of the input data;

determining, by the server, a change in the information content of the financial input data as compared to information content based on the historical data;

determining, by the server, a confidence level based on the change in the information content of the financial input data as compared to the information content based on the historical data;

assessing, by the server, whether the change was caused by an error in the financial input data by categorizing the confidence level; and

generating, by the server, a report based on the categorized confidence level.

Claim 44.

The method according to claim 43, wherein calculating the information content of the financial input data comprises processing non-parametric resampling statistics on changes in the information content in the financial input data.

Claim 45.

The method according to claim 43, further comprising calculating the information content of the historical data by processing non-parametric resampling statistics on changes in the information content in the historical data.

Claim 46.

The method according to claim 43, wherein calculating the information content of the financial input data comprises processing parametric statistics on changes in the information content in the financial input data.

Claim 47.

The method according to claim 43, further comprising calculating the information content of the historical data by processing parametric statistics on changes in the information content in the historical data.

Claim 48.

The method according to claim 43, wherein calculating the information content of the financial input data comprises processing Bayesian statistics on changes in the information content in the financial input data.

Claim 49.

The method according to claim 43, further comprising calculating the information content of the historical data by processing Bayesian statistics on changes in the information content in the historical data.

Claim 50.

The method according to claim 43, further comprising presenting the confidence level on a logarithmic scale of odds ratios.

Claim 51.

The method according to claim 43, wherein determining the measurement for the investment based on the financial input data comprises deriving a mark to market or maximum likely increase in value.

Claim 52.

The method according to claim 43, wherein the report comprises a symbol representing a possibility of an error in the financial input data.

Allowable Subject Matter

3. Claims 43-52 are allowed over the prior art record.
4. The following is an examiner's statement of reasons for allowance:
 5. The closest prior art of record Lambrecht (US Patent 6,185,512) discloses a method for determining measurements of a surface includes determining a trend for a plurality of measurements and determining, for each of at least one of the plurality of measurements, an associated residual between the trend and the measurement and determining, for each of at least one of the associated residuals, an interpolated value for the residual, while Lambrecht does not specifically disclose a input source of financial data Sampat et al. (US Patent 5,557,724) discloses a system for multicasting audio, video, and/or text data streams, the user interface has a video window for displaying the video stream, a set of audio controls for controlling the play of the audio stream, and a text reader bar for displaying the text stream wherein the data stream is financial data (paragraph 355)

As per claim 43 none of the art of record, taken individually or combination disclose at least the steps/components of: calculating, by the server, information content of the financial input data using continuous, discrete and a combination of continuous and discrete modes of the input data; determining, by the server, a change in the information content of the financial input data as compared to information content based on the historical data; determining, by the server, a confidence level based on the change in the information content of the financial input data as compared to the information content based on the historical data.

6. Claim 43 is allowable for the above cited reasons. Claims 44-52 are dependent upon claim 43 respectively and are therefore allowable for at least the same reasons.
